SUMMARY

Software Engineer with backend development and testing experience at Nearby Technologies, working on enterprise AEPS and banking services using Java, Spring Boot, REST APIs, Junit 5, and Mockito. Experienced across multiple backend layers including controllers, services, DAOs, DTOs, and integrations. Built projects including an ML-based phishing URL detection system and a browser-based 3D city simulation using Python, Flask, React, and Three.js.

EDUCATION

KIIT UNIVERSITY, Bhubaneswar, Odisha Sep 2022 – Oct 2026
Computer Science and Engineering CGPA: 7.61

JPS Public School, Raebareli, UP May 2021 - Jul 2022
Computer Science and Engineering Percentage: 76

JPS Public School, Raebareli, UP May 2019 - Jul 2020
Computer Science and Engineering Percentage: 86

EXPERIENCE

SWE Intern 2 June 2025 - 2 September 2025
Nearby Technologies Private Limited

- Developed and maintained JUnit test cases to ensure reliability and accuracy of backend services for live fintech projects.
- Created tests across controllers, services, DAOs, repositories, DTOs, and configuration components, improving backend test coverage and reliability.
- Gained hands-on experience with Spring Boot, Java, and Aadhaar-based KYC integrations, contributing to a scalable and secure fintech platform.
- Worked in an Agile environment, participating in code reviews and cross-functional discussions to streamline development and deployment processes.

PROJECTS

Phishing URL Detection Chrome Extension | *Python, Flask, CatBoost, REST APIs* July 2025 - Oct 2025

- Built an ML-powered phishing detection system analyzing 30+ URL and domain security features, achieving 95% classification accuracy.
- Implemented real-time URL safety scoring within the extension popup using color-coded indicators (Deep Green → Deep Red) to help non-technical users make safe browsing decisions
- Integrated WHOIS, DNS, Alexa and multiple external APIs using a fault-tolerant backend architecture to maintain uptime during service failures.
- Developed a responsive UI with animated progress indicators for smooth UX across devices.

Infinite City | *React, Three.js* Jan 2025 - Mar 2025

- Designed a browser-based 3D simulation of an infinitely generated city with procedural rendering.
- Added camera controls, terrain loading, and performance optimizations.
- Led documentation and architectural design for academic and development clarity.

SKILLS

Languages: Java, Python, SQL

Frameworks: Spring Boot, Flask, React, Three.js, REST APIs

Testing & Tools: Junit 5, Unit Testing, Integration Testing, Git, GitHub, Bitbucket, Jira, Slack

Concept: Agile/Scrum, OOP, DSA, Machine Learning
